

SUMMARY

Result-driven Senior Software Engineer with more than 5 years of experience in Full-Stack Development and a strong background in **GoLang**, **Python**, and **JavaScript**. Proven track record in translating complex business requirements into innovative software solutions. Skilled in leading successful projects and using machine learning techniques to drive enhanced outcomes. Certified in relevant technologies, demonstrating commitment to continuous learning and professional growth.

EXPERIENCE

- Collaborated with management, internal and development partners regarding software application design status and project progress.
- Explored and worked with **ClickHouse** by ingesting events and analyzing data retrieval performance to validate its efficiency in handling large datasets.
- Designed and implemented full-stack platforms for the QE Dashboard and worklog synchronization system using **ReactJS**, **GoLang**, and **Redis**—resulting in significant improvements in visibility and operational efficiency.
- Initiated and spearheaded **AI** projects, mentored employees, and managed an **AI** team, fostering innovation and development within the business unit.
- Engineered a popular Microsoft Teams app in **GoLang**, widely used by multiple teams and stakeholders, demonstrating expertise in scalable and reliable software development.
- Established and managed a team to implement **CIS** and **DAST** security standards using **GoLang**, ensuring compliance across **AWS**, **GCP**, and **Kubernetes** environments.
- Architected and developed an automation framework integrated with **GitLab CI** and **Python**, using the **attack-range** tool for continuous security content validation.

PROJECTS

- StrongDM Teams App

Tech Stacks: GoLang, MS Teams Adaptive Cards, gRPC API

 - Developed a Microsoft Teams application in GoLang for StrongDM, enabling on-the-go validation of user permissions and management of access privileges directly from MS Teams.
 - Implemented comprehensive unit and integration tests to ensure continuous bug-free & optimized code delivery.

DAST Scan on Cloud Realms

Tech Stacks: GoLang, ZAP, Kube-bench, Kubernetes, Terraform

 - Integrated the ZAP tool to continuously run DAST scans, including checks for common vulnerabilities across cloud realms deployed in AWS and GCP.
 - Customized test configurations to align with organizational requirements, ensuring accurate and relevant security assessments.

Quality Engineering Dashboard

Tech Stacks: ReactJS, Python, Redis, PostgreSQL, Docker

 - Led and developed a full-stack web application that consumes and serves data via a secure REST API over HTTPS to help the QE team visualize pipelines and reports.

Sync Worklogs

Tech Stacks: GoLang, ReactJS, Docker, REST API, JSON

 - Created an automation tool to sync worklogs across Jira platforms by consuming and producing JSON data via their REST APIs, incorporating robust validation mechanisms.
 - Developed a user-friendly web application using ReactJS to provide seamless access and an enhanced user experience.

TECHNICAL SKILLS

Languages	: GoLang, Python, JavaScript, CSS
Frameworks	: ReactJs, Flask, FAST, Gin, Mux
Deployment Techs	: AWS, Kubernetes, Terraform, Docker
Data Intelligence	: Machine Learning, Deep Learning, AI, LLM
Dev Tools	: Visual Studio Code, Git, GitLab, GitHub
